

## 10. FINAL PUZZLE

You've made it to the final puzzle - congratulations! You must now convert your nine answer words to letter pairs. You must also place every number from 1-31 in the blank grid, as well as five 0s. Use the other two grids to guide you: these indicate the sums of digits in various rectangular regions. There cannot be more than one 0 in each row and column. Once both parts of the puzzle are complete, figure out what to do to reveal your ultimate answer phrase.
